<http://www.wildlifedamagecontrol.com>

Warning: These are instructions for the “Little Woodie” only. Read all the instructions carefully. Follow all relevant laws. If you desire instructions for how to use the Out O’Sight Trap (AKA, Scissor Trap) please get a copy of Tom Schmidt’s Video available out our web site. Failure to use the trap correctly may result in injury.

Numbers coincide with photos. U.S. Patent # 6578314

1. With a shovel, pull the top off an active mole tunnel

3-5 (two bottom photos) Cock the Trap and push down over the center of the tunnel until the trap goes off. The trap should release slowly while cutting grooves across the tunnel.

2. Slide the Woodie on bottom of the trigger pan and leave flush with the end of the trigger pan.

4

5

6. Push the Woodie into set position and recock trap.

Push the trap into the same grooves stopping with the woodie about 1/2 inch from the bottom of the tunnel to keep it from discharging.

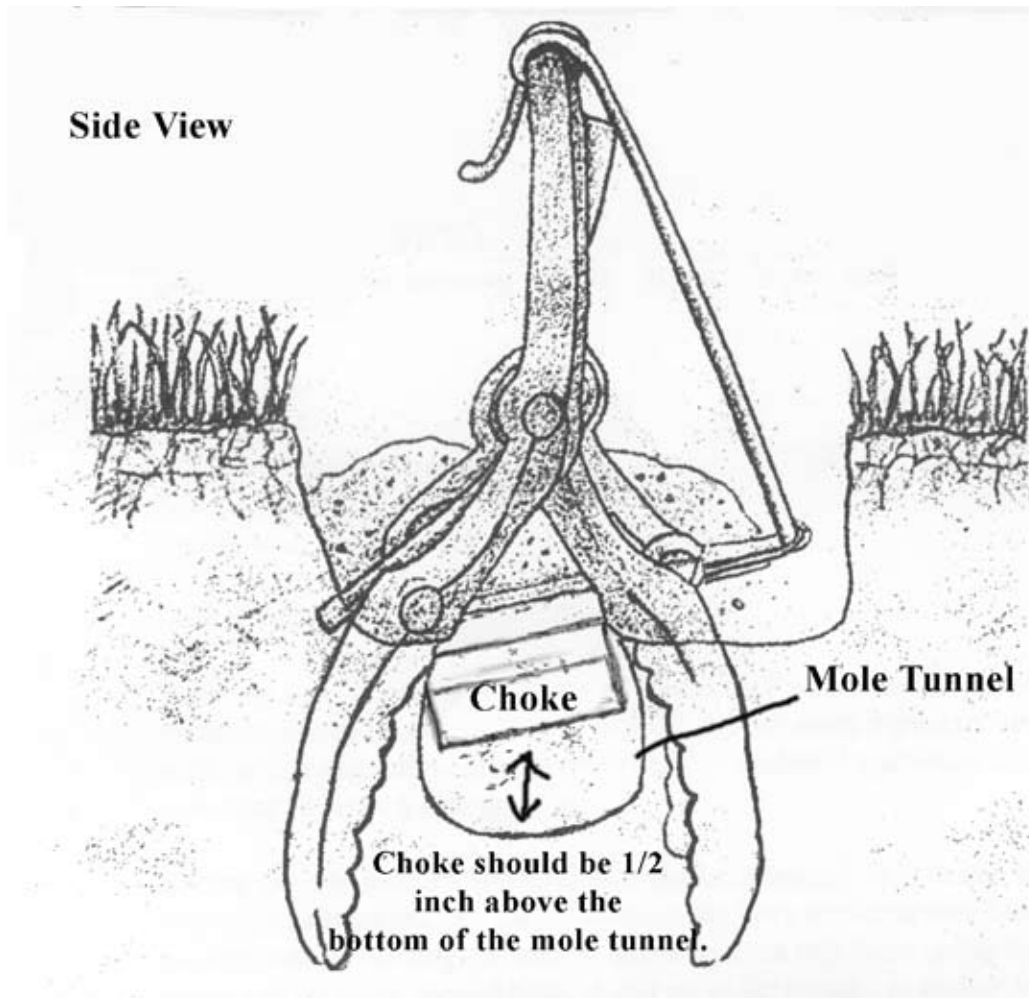

8. Since I am right handed, I find it best to hold the setting tools with my right hand whiel keeping my left index finder under the pan-lip tokeep the pin from slipping off the lip. If your left-handed do the opposite.

9. With your index finger still under the back of the pan lip, let tools drop and remove them with right hand.

10-11. Remove index finger from under pan lip and back fill with loose turf or soft dirt to keep light from entering the tunnel. Leave fill loose. Don't pack down.

Here is a side view diagram showing you what the trap and trigger placement should look like when you are ready to back fill the hole. The “Choke” is another word for the “Little Woodie”.

When the soil at the bottom of the tunnel is very loose, place the “Choke” flush with the bottom of the tunnel.
